

In the claims:

1. (Currently Amended) A method for inserting targeted advertisements into a media delivery stream during broadcast media programming, comprising the steps of:

(a) storing data files representing a plurality of advertisements in a media delivery device in a database, wherein the stored advertisements are each of a type that is determined to appeal to one or more users of the media delivery device;

(b) receiving a signal in the media delivery device to insert a stored advertisement into the media delivery stream during broadcast media programming, wherein the signal to insert the stored advertisement is sent with the broadcast media programming;

(c) inserting an advertisement stored in the database into the media delivery stream; and

(d) transmitting a request from the media delivery device to an external network through a telecommunications link to receive the plurality of advertisements for storage in the media delivery device; and

wherein the database includes a table for classifying the stored advertisements according to a plurality of categories, which includes a classification according to the type of advertisement that is stored, and wherein the signal includes at least one classification for one or more of the categories as provided in the table for selecting a commercial stored in the database for insertion into the media delivery stream.

2. (Original) The method for inserting targeted advertisements into a media delivery stream according to claim 1, wherein the advertisements are television commercials.

3. (Original) The method for inserting targeted advertisements into a media delivery stream according to claim 2, wherein the media delivery device is a set top box for receiving broadcast signals for a cable or satellite television network system.

4-5. (Cancelled)

6. (Previously Presented) The method for inserting targeted advertisements into a media delivery stream according to claim 1, further comprising the steps of searching the table in the database for at least one advertisement having a classification in at least one category that is provided in the signal.

7. (Original) The method for inserting targeted advertisements into a media delivery stream according to claim 6, wherein the at least one advertisement is a plurality of advertisements, further comprising the step of selecting an advertisement from the at least one advertisement having a classification provided in the signal by weighting the relative importance of each category in the table.

8. (Previously Presented) The method for inserting targeted advertisements into a media delivery stream according to claim 3, wherein the plurality of stored advertisements are received by the media delivery device as encoded data files through the telecommunications link to an external database of advertisements.

9. (Previously Presented) The method for inserting targeted advertisements into a media delivery stream according to claim 1, further comprising the steps of:

transmitting signals between the media delivery device and the external network indicating the one or more types of advertisements that appeal to users of the media delivery device; and

classifying the stored advertisements according to a plurality of categories, which includes a classification according to the type of advertisement that is stored.

10. (Previously Presented) The method for inserting targeted advertisements into a media delivery stream according to claim 1, further comprising the steps of:

after transmitting the request, receiving download signals from the broadcast media stream in the media delivery device to download the data files representing the advertisements for storage in the media delivery device, wherein, for each advertisement, the signals include a classification for one or more of the categories as provided in the table for selecting an advertisement stored in the database for insertion into the media

delivery stream;

downloading the data files representing the advertisements having a classification for one or more of the categories as provided in the table that matches a pre-stored classification in a list of classifications indicating the one or more types of advertisements that appeal to users of the media delivery device.

11. (Original) The method for inserting targeted advertisements into a media delivery stream according to claim 10, wherein categories in the table include one or more of: sponsor name; type of product advertised; relative pricing of product advertised; and location of sponsor.

12-20. (Cancelled)

21. (Currently Amended) A system for inserting television commercials stored locally in a television set top box into a media programming stream, comprising:

- (a) a receiver for receiving broadcast media programming into the set top box;
- (b) a commercials database for storing advertisements in the set top box;
- (c) a commercials detector for detecting audio tones in broadcast media

programming where one or more of the detected audio tones are substitution signals that indicate authorization for a local television station to insert locally stored advertisement into the media stream, wherein the locally stored advertisement which is inserted is determined based on the frequency that each of a plurality of advertisements stored in the set top box has been previously inserted, and wherein at least one advertisement among the plurality of stored advertisements which has not been frequently inserted is favored over the remaining plurality of stored advertisements; and

(d) switching logic to interrupt a television connected to the set top box from the media programming stream and to temporarily decode a television commercial stored in the commercials database when a substitution signal is detected in the commercials detector.

22-23. (Cancelled)
